

Digital Refractometers for Sodium chloride. Salinity and Brix Measurements

The digital refractometers are optical instruments that employ the measurement of refractive index to determine the % Brix of sugar (MA871), % Brix, "Oechsle and "KMW" in Grape Juice Must (MA885), Sodium chloride concentration (MA886), Salinity (MA887), in aqueous solutions.

The digital refractometers eliminate the uncertainity associated with mechanical refractometers and are easily portable for measurements in the field.

Key features include:

- Dual-level LCD
- Automatic Temperature Compensation (ATC)
- · Easy setup and storage
- Battery operation with Low Power indicator (BEPS)
- Automatically turns off after 3 minutes of non-use

MI415: Microprocessor digital turbidity meter

Turbidity refers to the concentration of undissolved, suspended particles present in a liquid. Turbidity is a measure of the clarity of a sample. For potable water applications turbidity is a good indicator of water quality. Turbidity measurement is achieved by analyzing the amount of light refracted from suspended particles such as clay, silt and organic material. By measuring turbidity, by photometric or tube methods, it is possible to estimate suspended solids content.

> MI415 has two operating ranges; 0.00 to 50.00 FNU, and 50 to 1000 FNU that can accommodate the most turbid condition you may encounter.

> > MI415 is supplied in a hard carrying case, complete with calibration

_		
	Specification	MI415 PRO
	Range	0.00 to 50.00 FNU; 50 to 1000 FNU
	Resolution	0.01 FNU; 1 FNU
	Accuracy	±0.5 FNU or
		±5% of reading (whichever is greater)
	Method	detection of scattered light
	Light source	infrared LED
	Light detector	silicon photocell
	Environment	0 to 50°C; max RH 100%
	Battery Type	1 x 9V
	Auto off	after 5 minutes of non use
	Dimensions	192 x 104 x 52 mm
	Weight	380 g

Low cost digital handy photometers

The revolutionary new range of Milwaukee handy photometers are compact and easy to use. Within a few minutes you can get the required result on the LCD and the meter automatically turns off after 2 minutes in order to save

Electrodes. Probes and Solutions

Milwaukee has a wide assortment of pH, ORP, Conductivity and other specialty sensors and calibration, maintenance and cleaning solutions, to meet all your specific requirements. Finding the right electrode for a specific application is a very important task and in order to solve this selection problem it is important to consider the following: electrode body, reference construction and junction.

	Electrode	s and Probes	
	MA815D/1	4-ring Conductivity/TDS/NaCl/Temperature probe with DIN connector and 1meter cable	
MA840 Polarographic D.O. probe with 3 meter cable			
MA906BR/1 pH/Temp. Amplified Probe with 1 meter cable			
	MA814DB/1	4-ring Conductivity/TDS/NaCl/Temperature probe with DIN connector and 1meter cable	
SE220 Double junction pH electrode with 1 meter cable and gel filled electrolyte MA916B/1 pH Glass Electrode with BNC Connector and 1m cable			
	MA918B/1 Combined Glass pH Electrode with 3 Diaphrams, Double Junction and 1 meter cable		
	MA921B/1	Double junction Platinum ORP electrode with BNC Connector and 1 m cable	

	Calibra	tion, Maintenance & Cleaning Solutions
	MA9001	pH 1.68 calibration buffer solution 230 ml
	MA9004	pH 4.01 calibration buffer solution 230 ml
	MA9006	pH 6.86 calibration buffer solution 230 ml
	MA9007	pH 7.01 calibration buffer solution 230 ml
	MA9009	pH 9.18 calibration buffer solution 230 ml

Photometers for pH, free and total chlorine,

iron, ammonia and phosphate measurement

The latest laboratory grade microprocessor photometers have an excellent

repeatability and are ideal for field measurements. Chlorine is the most

commonly used water disinfectant.

processing to sterilization.

Applications vary from treatment of drinking water and wastewater to pool and spa sanitization and food

All photometers come complete in hard carrying case and reagents for 100 tests, making it ideal for field

Laboratory Bench Meters for measuring pH. mV. TDS. Conductivity, NaCl and Temp

The high performance economy microprocessor-based bench meters are an ideal tool in schools, laboratories and production plants. They are provided with a series of new diagnostic features which add an entirely new dimension to the measurement of pH, ORP, TDS, EC, NaCl, Temp by allowing the user to dramatically improve the reliability of the measurement

- pH extended range: -2.00 to 20.00 pH, -2.000 to 20.000 pH (MW106)
- Logging: Maximum 1000 records (maximum 100 lots) On demand, 200;
- On stability, 200; Interval logging, 1000
- PC connectivity (MW151): 1 micro USB port
- auto-off feature to preserve battery life
- dedicated GLP key

Specifications

Built-in rechargeable battery with 8 hours battery life

Each meter is supplied in a carton box complete with sensors and calibration

Laboratory Bench meters for measuring pH, mV, Dissolved Oxygen and Temperature

MW150 is an advanced pH/ORP/Temp microprocessor-based bench meter. It is ideal for students and technicians who need fast and reliable measurements.

> The MW190 is ideal for testing Dissolved Oxygen in the pharmaceutical and food Industry, as well as monitoring in water treatment plants. The user can choose to measure D.O. readings in mg/L or % of saturation of O2. This meter can be used for any type of water, as it allows measurements to compensate for temperature, altitude and salinity factors. The automatic logging interval can be set to perform analysis and store data into the memory.

Portable meters for measuring pH. ORP. Conductivity. TDS. NaCl. Dissolved Oxygen and Temp

These pH, Conductivity, TDS, NaCl, Dissolved Oxygen, and Temperature portable meters are designed to provide laboratory results and accuracy even under harsh industrial condition. This new line of MW portable meters will suit all budgets and provide the user with flexibility in a wide range of applications.

- IP67 waterproof casing
- pH extended range: -2.00 to 20.00 pH, -2.000 to 20.000 pH (MW106)
- Logging: Maximum 1000 records (maximum 100 lots) On demand, 200; On stability, 200; Interval logging, 1000
- PC connectivity (MW106): 1 micro USB port
- alphanumeric LCD displayed messages for user friendly, intuitive information / warning / error messages
- · auto-off feature to preserve battery life
- internal clock and date to keep track of different time-dependent functions (calibration timestamp, calibration time out)
- dedicated GLP key

Each meter is supplied in a hard carrying case complete with sensors and calibration solutions.

Pocket size pH, ORP, EC, TDS and Temperature Multi-parameter meters with replaceable electrode

Waterproof pH testers with large dual-level LCD that displays pH, ORP, EC, TDS and temperature (°C or °F). They have a stability indicator and hold function that freezes the display for easy and accurate recording. The large display also has graphic symbols to guide you through all operations.

Complete with a temperature probe for faster and more precise temperature measurement they compensate automatically for temperature. Calibration is made automatically in 1 or 2 points with memorized standard and NIST buffer sets. Auto power OFF saves battery power after non-use.

The double-junction electrode can be replaced in a very fast and simple way! The modular design allows easy electrode and battery replacement.

The MW803 and MW804 Combination testers with dual-level LCD measure pH/Conductivity/TDS/Temperature in one single tester!
